

ABSTRACT

An apparatus of mounting items to a gunwale of a boat is provided. The apparatus includes a clamp comprised of at least two clamp parts. Each clamp part include a nose part and a shoulder portion. A fastener may extend through each nose part. The nose part of a first one of the clamp parts extends into abutting contact with the shoulder portion of a second one of the clamp parts. The nose part of the second one of the clamp parts extends in abutting contact with the shoulder portion of the first one of the clamp parts. The clamp further includes an aperture bounded by the clamp parts. The aperture includes an opening portion that is operative to extend around the gunwale of a boat. The aperture further includes a stem portion that is operative to extend adjacent each side of a portion of a hull of the boat.
